

The Gyeonggi Sharing Service promotes the sharing of public facilities with residents

Gyeonggi-do established the 'Gyeonggi Sharing Service', an integrated system for residents to make reservations to use public facilities, that were built with residents' taxes, thereby enhancing their usage and expanding the services provided.

Launching the Gyeonggi Sharing Service, an integrated reservation system

The Gyeonggi Sharing Service consists of a user system (share.gg.go.kr) and a facility management system. The website offers a list of public facilities with 360° VR panoramic images, allowing residents to look at the facilities at anytime and anywhere.

Facility managers can designate and modify the facilities' longitude and latitude, allowing visitors to easily locate facilities.

Establishing the Gyeonggi Sharing Service Promotion Plan

Gyeonggi-do established a comprehensive promotion plan for the system, which includes: ① expansion and diversification of shared facilities; ② system stabilization and quality control; ③ phased expansion of participating institutions; ④ development of support system for stable operations; and ⑤ a promotion strategy.

Under the plan, Gyeonggi-do strives to increase the number of registered facilities through regular investigation and exploration of facilities for sharing, while diversifying services, and improving the system performance.

Each year, the province is increasing the number of 360° VR images and enhancing user convenience and system performance by verifying information accuracy and reliability. It is also expanding the number of participants by introducing an assessment system and holding on-site presentations. For the system's stable operation, Gyeonggi-do has designated managers of participating institutions, offered training for facility operators, and developed an integrated maintenance support system.

Implementing various policies to expand sharing services

Last year Gyeonggi-do added functions needed by cities and counties to expand the number of facilities available for sharing. As of May 2022, 1,863 facilities of 23 public institutions and 31 cities and counties in Gyeonggi-do are registered for the sharing service, allowing residents to access a wide range of public resources.

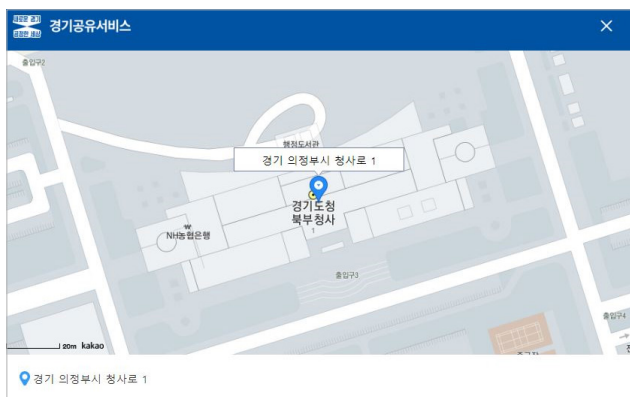

Moreover, various policies are being implemented to increase the types of sharing services.

First, the Gyeonggi Sharing Service Managers Council is improving the cooperation and communication among cities, communities, provincial governments, and public agencies and collaborating with facility managers to make more resources available to residents. The focus has shifted from task-oriented spaces, such as meeting rooms, lecture rooms, and auditoriums, to sports and activity spaces, such as tennis courts, football fields, golf courses, studios, practice rooms, and vegetable gardens.

Second, by holding on-site meetings, the opinions of participating institutions can be addressed, so the managers of public facilities can utilize the system efficiently. By automatically linking the Gyeonggi Sharing Service to ‘GongyuNuri’, a service by the Ministry of the Interior and Safety, resource registration and modification was increased, making it the service more convenient for managers and users.

Lastly, instead of relying only on participants, the provincial government investigated sharing resources through experience programs and city tours. Also, by collecting opinions from the ‘Gyeonggi Sarang Citizen Participation Group’, the government developed content, such as renting out items and camping sites.’

Going forward, by introducing rental services, lectures, experiential programs, camping sites, idle resources, and other services, the Gyeonggi Sharing Service is expected to improve leisure and the quality of life of Gyeonggi residents.
